Introduction to iOS APP
DEVELOPMENT

CLASS PROJECT

MO

Write a program in either Swift or Objective-C.
The program can be anything that interests you.

The purpose of the project is for you to demonstrate that you have understanding of core language concepts.

To get maximum credit, somewhere in your project, you must:

- Have at least one user defined class.
- Use NSArray
- Use NSDictionary
- Write at least one loop (for, while)
- Write at least one condition (if)
- Your program should compile and run without errors under either Xcode 6.4 or Xcode 7.0. It is ok to have warnings.

- The work must be done entirely by you.
- You need to submit the Xcode project as a Zip file (like the Home Works) by Oct 10th.
- You will demo your project to the rest of the class On Oct 11th.
